

Document 1

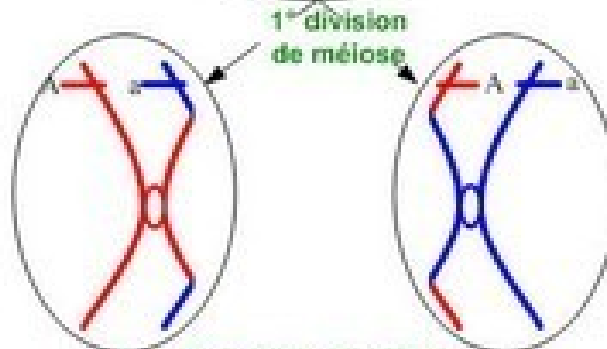

La cellule initiale à $2n = 2$

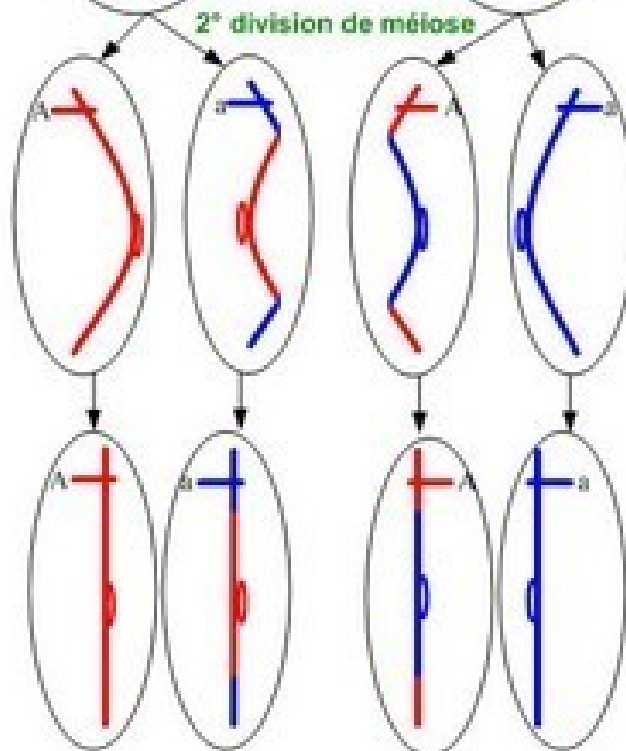

Chiasm
(enjambements) en
prophase I entre
chromosomes
homologues

Séparation des
chromosomes
homologues en
anaphase I après
crossing-over

Séparation des
chromatides en
anaphase II

Résultat en **télophase II**
(fin de méiose) :
garniture
chromosomique des
gamètes formés

document 2

Variation de la quantité d'ADN au cours de la méiose

Document 3

Document 4
